

## DESCRIPTION

### Italian-made with 6.5T Capacity

Mobile column lifts offer you a convenient and flexible lifting option for heavy vehicles.

Their exceptional mobility means column lifts don't take up a fixed space in your workshop and can be easily stored away when not in use. Column lifts allow you to do more with your existing workshop space than alternative lifting option such as fixed four post hoists.

LM65C's wired configuration means there's no need to worry about whether batteries are charged or not – your technicians simply plug them in and they're ready to work! A wired configuration can also be preferable in workshops where a wireless signal may not be stable.

### High quality Italian engineering and design

LM65C mobile column lifts are made in Italy by LiftMax, a brand developed by Levanta to meet the market's need for heavy-duty, reliable, up-to-date heavy vehicle lifting solutions.

Since their inception in the early 2000s, LiftMax's ongoing product development ensure the brand remains at the forefront of column lifts available to the Australian market.

### LM65C column lift features

#### Full function controls on each column

Operators can control the lift from any individual column using the full function controls, selecting a lifting configuration of either full set, single axle (pair), or single column.

The user-friendly 7" colour LCD touch screen displays the column configuration, battery charge, the synchronisation system being used (wireless or cable), working height, and a diagnostic of the current state of repair.

The robust, maintenance-free controls have been designed to withstand the demands of your busy workshop environment.

#### Adjustable lifting forks

The fully adjustable lifting forks can safely lift a range of wheel diameters.

### Wired power connection

Wired power means there's no batteries to maintain or charge – and no need to worry about the quality of your wireless signal.

### High quality rechargeable batteries

The 24V DC power system uses premium quality gel cell storage batteries, which can quickly and easily be recharged using the built-in 240V 10-amp chargers. Battery life between charges will depend on operational factors, but under normal operating conditions you can expect over 30 lifts before recharging is needed.

### Superior mobility and manoeuvrability

Mobility is a crucial factor when choosing a column lift. Thanks to their compact dimensions (1,150 x 1,217 mm) and lower centre of gravity, LM65C column lifts offer you great mobility.

What's more, they come equipped with a steering handle attached to a spring-loaded industrial style "easy roll" full bearing wheel, that's lockable in position via a foot brake. This unique design can achieve a turning angle of approximately 180°.

Tech Specs	LM65C
Capacity	6.5T
Lifting Stroke	1,760 mm
Lifting Speed	20 mm/s
Height	2,400 mm
Width	1,150 mm
Depth	1,177 mm
Column Weight	580 kg (without oil)
Power	415V 3PH
