

LWS-WL-80

80kg Wheel Lifter

DESCRIPTION

The LWS-WL-80 wheel lifter takes away the risk of a back injury when you're removing wheels from a vehicle while it's on a hoist.

With an 80kg lift capacity, LWS-WL-80 is capable of lifting almost any small or large wheels. The battery operated design takes away the need for the use of air lines, removing yet another risk.

The wheel lifter uses a screw lifting system with a two speed motor, making it easier for the operator to align wheel studs when mounting the wheel. The lift also has inbuilt rollers on the forks to further assist the operator with aligning wheel studs.

The LWS-WL-80 has a twelve-month warranty and is a must for any workshop removing tyres from vehicles during service operations.

Tech Specs	LWS-WL-80
Maximum Capacity	80 kg
Run high	1,290 mm
Up/Down speed	0.02m/s
Batteries	12v -12ah
Base width	330 mm
Base long	380 mm
